## **SECTION 3 - HAZARD IDENTIFICATION**

DECTION 3 - HAZA	KD IDENTIFICATION	<u>21N</u>
Signs and symptoms	1. Acute	Do not open battery. Avoid contact with internal components.
of exposure	hazards	Internal components include lead and liquid electrolyte.
	ated Batter	Electrolyte - Electrolyte is corrosive and contact may cause skin
		irritation and chemical burns. Electrolyte causes severe irritation
		and burns of eyes, nose and throat. Ingestion can cause severe
		burns and vomiting.
		Lead - Direct skin or eye contact may cause local irritation.
		Inhalation or ingestion of lead dust or fumes may result in
		headache, nausea, vomiting, abdominal spasms, fatigue, sleep
		disturbances, weight loss, anaemia and leg, arm and joint pain.
	2. Sub-chronic	Electrolyte - Repeated contact with sulfuric acid battery
	and chronic	electrolyte fluid may cause drying of the skin which may result
	health effects	in irritation, dermatitis and skin burns. Repeated exposure to
		sulfuric acid mist may cause erosion of teeth, chronic eye
		irritation and/or chronic inflammation of the nose, throat and
	5	lungs.
		Lead - Prolonged exposure may cause central nervous system
	*	damage, gastrointestinal disturbances, anaemia, wrist-drop and
		kidney dysfunction. Pregnant women should be protected from
		excessive exposure to prevent lead from crossing the placental
		barrier and causing infant neurological disorders.
Medical conditions		If battery is broken or material spilled, then persons with the
generally aggravated		following medical conditions must take precaution; pulmonary
by exposure		oedema, bronchitis, emphysema, dental erosion and
-		tracheobronchitis.
Routes of entry	Inhalation – Yes	Eye contact – Yes
	<u> </u>	Skin contact - Yes
	I.A.R.C	
Chemical(s) listed as	Monographs - Yes	NIOSH - Yes
carcinogen or		OSHA - No
potential carcinogen		

# **SECTION 4 - FIRST AID MEASURES**

SECTI	ON 4 - FIRST A.	ID MEASURES
Emerg	gency and first	Contact with internal components if battery is opened, broken or spilled.
aid pro	ocedures	
1.	Inhalation	Remove to fresh air and provide medical oxygen/ CPR if needed. Obtain medical
		attention.
2.	Eyes	Immediately flush with water for at least 15 minutes, hold eyelids open. Obtain
		medical attention.
3.	Skin	Flush contacted area with large amounts of water for at least 15 minutes. Remove
		contaminated clothing and obtain medical attention if necessary.
4.	Ingestion	Do not induce vomiting. If conscious drink large amounts of water/ milk. Obtain
		medical attention. Never give anything by mouth to an unconscious person.

		Avoid open flames/ sparks/other sources of ignition near battery. To avoid risk of fire or							
		explosion, keep sparks or other sources of ignition away from batteries and do not allow							
		metallic materials to simultaneously contact negative and positive terminals of cells and							
		batteries.							
		Sulfuric acid react	s violently	with w	ater/ or	ganics.			

# SECTION 6 - ACCIDENTAL REALEASE MEASURES

**Procedures for clean-up**: Stop release, if possible. Avoid contact with any spilled material. Contain spill, isolate hazard area, and deny entry. Limit site access to emergency responders. Neutralize with sodium bicarbonate, soda ash, lime or another neutralizing agent. Place battery in suitable container for disposal. Dispose of contaminated material in accordance with applicable local, state and federal regulations. Sodium bicarbonate, soda ash, sand, lime or another neutralizing agent should be kept on-site for spill remediation. **Personal precautions:** Acid resistant aprons, boots and protective clothing. ANSI approved safety glasses with side shields/ field shield recommended. Ventilate enclosed areas.

**Environmental precautions:** Lead and its compounds and sulfuric acid can pose a severe threat to the environment. Contamination of water, soil and air should be prevented.

#### **SECTION 7 - HANDLING AND STORAGE**

OLCITOIT I	HINDENIG HIND STOKKIGE					
Precautions to	Keep away from flames during and immediately after charging. Combustion or					
be taken in	overcharging may create or liberate toxic and hazardous gases and liquids including					
handling and	hydrogen, sulfuric acid mist, sulphur dioxide, stibine, arsine and sulfuric acid.					
storage	Store batteries in cool, dry, well-ventilated area.					
	Do not short circuit battery terminals or remove vent caps during storage or recharging.					
	Protect battery from physical damage.					
Other	Good personal hygiene and work practices are mandatory.					
precautions	Refrain from eating, drinking or smoking in working area.					
	Thoroughly wash hands, face, neck and arms before eating, drinking or smoking.					
	Launder soiled clothed before reuse.					
	Emptied batteries contain hazardous sulfuric acid residues.

Appearance and	Appearance and odour Battery: Polypropylene or hard rubber case, solid.								
Lead: Gra			Lead: Gray, metallic, solid						
Electrolyte:			e: Liquid, co	lourless, o	ily fluid, nuisa	nce od	our when	ho	t or charging
		battery.							

**SECTION 10 - STABILITY AND REACTIVITY** 

Conditions to	Heat, moisture and incompatibles. Prevent fires and any other ignition materials around
avoid	lead acid battery. The electrolyte reacts with water to produce heat.
Materials to	Sparks, open flames, keep battery case away from strong oxidizers.
avoid	
Incompatible	Avoid water, potassium product metals and organic materials, oxidizing and reducing
	agents.
Decomposing	Toxic fumes of oxides when heated to decomposition will react with water to form
	corrosive fumes, reacts with carbonates to produce carbon dioxide and reacts with
	hydrogen to produce hydrogen cyanide and hydrogen sulphate which is poisonous

#### SECTION 11 - TOXICOLOGICAL INFORMATION

General: The primary routes of exposure to lead are ingestion or inhalation of dust and fumes.

ACUTE: INGESTION/INHALATION

Exposure to lead and its compounds may cause headache, nausea, vomiting, abdominal spasms, fatigue, sleep disturbances, weight loss, anaemia and pain in the legs, arms and joints. Kidney damage, as well as anaemia, can occur from acute exposure.

**CHRONIC: INGESTION/INHALATION** 

Prolonged exposure to lead and its compounds may produce many of the symptoms of short-term exposure and may also cause central nervous system damage, gastrointestinal disturbances, anaemia and wrist drop. Symptoms of central nervous system damage include fatigue, headaches, tremors, hypertension, hallucinations, convulsions and delirium. kidney dysfunction and possible injury has also been associated with chronic lead poisoning. Chronic over-exposure to lead has been implicated as a causative agent for the impairment of male and female reproductive capacity, but there is, at present, no substantiation of the implication.

Pregnant women should be protected from excessive exposure. Lead can cross the placental barrier and unborn children may suffer neurological damage or developmental problems due to excessive lead exposure in pregnant women.

#### **SECTION 12 - ECOLOGICAL INFORMATION**

In most surface water and groundwater, lead forms compounds with anions such as hydroxides, carbonates, sulphates and phosphates and precipitates out of the water column. Lead may occur as absorbed ions or surface coatings on sediment mineral particles or may be carried in colloidal particles in surface water. Most lead is strongly stained in soil, resulting in little mobility. Lead may be immobilized by ion exchange with hydrous oxides or clays or by chelation with humic and fulvic acids in the soil. Lead (when in the dissolved phase) is bioaccumulated by plants and animals, both aquatic and terrestrial.

#### **SECTION 13 - DISPOSAL CONSIDERATIONS**

Waste disposal	Read the disposal methods on the product. Taking the product to an approved recycling
method	plant is advised. Any other material that cannot be recovered should be disposed of as
	hazardous waste.
	Observe all warning and precautions listed on the product.

# SECTION 14 - TRANSPORT INFORMATION

Proper shipping name: Batteries, wet, filled with acid

Hazard class: 8 ID number: UN 2794 Packing group: III Label: Corrosive

IMO proper shipping name: Batteries, wet, filled with acid
